

## Graph Coloring

A graph  $G(V, E)$  is given. we need to color the graph using  $m$  colors in such a way that no 2 adjacent nodes can have the same color. This problem is referred as  $m$ -colorability decision problem

where  $m$  is chromatic no.  
 minimum no. of colors  
 required to color the graph

0	1	0	1
1	0	1	0
0	1	0	1
1	0	1	0

Assume color no. are 1, 2, 3
